

JINAN HONGYANG CNC MACHINERY CO., LTD

Air Cooled Spindle Motor

The air-cooled spindle/CNC motor is normally cooled by an independent fan. It has two shapes: round and square. While the round ones are usually fixed with spindle holders, the square ones with screw holes can typically be directly fixed to the machines. With the characteristics of high power and low temperature rise, the [air cooled CNC spindle motor](#) is often used in CNC Nesting Machine of 3pcs spindles machine and 4pcs spindles machine. As a professional [CNC parts manufacturer](#), Hongyang can provide you with various air-cooled motors with different power: 1.5 kw air cooled spindle motor and 800w air cooled spindle motor.
